

Zimo Li

Atlanta, GA | (470) 298-0666 | zimoli2006@gmail.com | github.com/Z1M000 | linkedin.com/in/zimoli2006/

EDUCATION

Emory University, Atlanta, GA

Expected Graduation: May 2028

Bachelor of Science in Computer Science (AI Concentration), Minor in Applied Mathematics

GPA: 4.0/4.0

Honors: Dean's List, Phi Eta Sigma Honor Society, Rewriting the Code

Coursework: Data Structures & Algorithms, Artificial Intelligence, Machine Learning, Database Systems, Computer Architecture

EXPERIENCE

Emory University | Software Engineering Research Intern

06/2026 - Present

Python, Java, Docker, Git, Linux, AWS

Remote

- Integrate and validate 5 open-source clone detectors to benchmark repository-level LLM-generated code rewrites using Linux and Docker
- Standardize detector interfaces and evaluation workflows within a common benchmarking pipeline

Emory University | Web Development Intern ([Live Site](#) • [Paper](#))

12/2025 - 02/2026

React, TypeScript, Bootstrap, Python

Atlanta, GA (Hybrid)

- Built a diabetes ML research platform for 20+ time-series glucose datasets with data preview and filtering features, improving data access efficiency and consistency for researchers
- Enabled rapid dataset profiling and cross-dataset comparison by visualizing glucose range percentages

Emory University | Software Engineering Research Intern (NSF REU)

05/2025 - 08/2025

Python, REST APIs, LanceDB, Hugging Face

Remote

- Implemented ingestion pipelines for ~250M academic papers and extracted multi-source citation data to support an AI-powered literature review platform
- Developed LLM-based benchmarks leveraging Gemini-generated reference answers to compare retrieval strategies for paper discovery and summarization
- Automated the download, conversion, and upload of 20K+ medical imaging samples from CT-RATE into the M3D format for downstream AI medical research

PROJECTS

[Emory Women's Golf Web](#) | Project Lead, Full-Stack Developer

11/2025 - Present

React, TypeScript, Bootstrap, Python, REST APIs, FastAPI, Firebase, MongoDB

- Pioneered and deployed the first digital tracking system for Emory Women's Golf Points Game, transforming a manual whiteboard workflow into a centralized platform with daily usage by 10+ athletes and coaches
- Implemented Firebase authentication with role-based access control to manage live standings and activities, reducing manual coordination time by 100+ hours annually

[Customer Churn Prediction & Retention Analytics](#) | Project Lead, Machine Learning Engineer

01/2026 - 04/2026

Python, scikit-learn, Pandas, NumPy, Matplotlib

- Led a 3-person team to analyze, segment, and predict telecom customer churn and propose targeted retention strategies
- Optimized 5 ML models through hyperparameter and classification threshold tuning, improving Random Forest F1 by 7.0% and Decision Tree F1 by 5.5%

[DooleyHelpz](#) | Database Lead, Backend Developer

08/2025 - 12/2025

Python, MongoDB

- Architected a MongoDB database storing 4,000+ course records that serves an academic planning platform for 300+ Emory CS undergraduates
- Built a data-driven graduation requirement checker with cascading rule evaluation, enabling flexible schedule validation
- Generated synthetic student datasets to train an ML recommendation model, with 65 students piloting the system

ACTIVITIES

[Emory Women's Golf Team](#)

08/2024 - Present

- Ranked among the top NCAA Division III golfers nationally while balancing 20+ hours per week of training and competition with a full academic course load, demonstrating teamwork, resilience, and the ability to perform under pressure
- 2025 & 2026 NCAA Division III National Team Champion, 2025-26 Division III Player of the Year, 2024-25 Division III Freshman of the Year, 2024-25 & 2025-26 Division III First Team All-American

SKILLS

Programming Languages: Python, Java, TypeScript, JavaScript, SQL, HTML/CSS, C, MIPS Assembly

Frameworks & Libraries: React, FastAPI, Bootstrap, scikit-learn, Pandas, NumPy, Hugging Face

Tools, Databases & Cloud: Git, Docker, Linux, MongoDB, PostgreSQL, Firebase, Google Cloud Platform, AWS, Vercel, Fly.io
